

## ***HERE'S SOME OF THE LATEST AND GREATEST IN SPEAKERCRAFT TECHNOLOGY***

**SpeakerCraft** came out with the first fully pivoting in-wall speaker.

Now, their **AIM7 series** features a larger woofer, deeper bass and higher sound pressure levels. The entire baffle pivots and the tweeter pivots independently as well. This ability to aim in-wall speakers toward the listening area makes a huge difference in overall performance.

**SpeakerCraft's MODE (Music On Demand Experience)  
Keypad:** an award winning MZC (Multi-Zoned Control) system.

This keypad features a full color display with a scroll wheel and menu driven interface. The MODE also controls and displays song information from the iPod. Now, utilizing a proprietary dock, owners can locate their iPod in one location and access it throughout the home. At the same time users can display and select songs, artists, genres, and play lists as though they had the iPod in their hand.
